

Azwell AI

Denodo & Azwell AI: Advancing Data-Driven AI Solutions

Azwell AI was established as a spin-off from Azwellplus to specialize in AI, and the two companies remain affiliates. As the official distributor of NVIDIA in South Korea, Azwell AI is involved in the majority of domestic NVIDIA-related AI projects. We believe that data-centric business is fundamental to AI initiatives, and we are already providing data-driven consulting and implementation services, which enable us to create new business opportunities.

The Business Challenges We Solve

Rapidly Evolving AI Trends

AI is advancing rapidly, with trends shifting from concepts like “RAG” to “agentic AI.” Clients want to stay ahead but often lack the necessary tools. NVIDIA provides Azwell AI with early access to cutting-edge technologies through regular meetings with their solution engineers. This enables us to quickly assess client needs and deliver timely, effective solutions.

Breaking Down Data Silos

Clients' data is often fragmented across departments and formats, hindering analytics and AI integration. We help unify these siloed datasets using our solutions, enabling seamless data integration and supporting generative AI initiatives.

The Rising Demand for AIOps

Clients seek efficient AI operations (AIOps) to scale projects and automate workflows via machine learning operations (MLOps). However, building these systems in-house is both resource-intensive and risky. We offer ready-to-deploy solutions that streamline AIOps, saving time and setting up companies for success.

Our Solution

Azwell AI addresses the core challenges of modern enterprises — rapid AI evolution, fragmented data environments, and the rising demand for scalable AI operations — through an integrated data and AI architecture built on the Denodo Platform, which uses a logical strategy for data management.

By leveraging Denodo, Azwell AI unifies disconnected data sources across legacy systems, cloud platforms, and business units, creating a single semantic layer that supports real-time analytics and AI enablement. This foundation empowers organizations to adopt generative AI, agentic AI, and advanced data science initiatives with greater speed, accuracy, and governance. Our solution framework combines Denodo's logical data management capabilities with NVIDIA's AI infrastructure, Dataiku's collaborative MLOps platform, and Upstage's Korean-language LLM solutions. Through this full-stack approach, we help enterprises rapidly build AI ecosystems that are data-centric, scalable, and production-ready — transforming siloed data into actionable intelligence.

Ultimately, Azwell AI's value lies in translating business challenges into measurable outcomes. Whether improving model reliability through better data access, accelerating AI adoption, or enabling compliance across hybrid environments, we deliver tailored, end-to-end solutions that enable clients to achieve AI success with confidence.

The Azwell + Denodo Partnership

Through our partnership with Denodo, we support our clients in building robust AI systems. Azwell AI is an AI full-stack company that begins with consulting for clients pursuing AI initiatives and provides comprehensive infrastructure sizing and deployment, as well as all necessary solutions and services. For clients whose data remains siloed and unintegrated, we recommend implementing a data fabric using Denodo. This enables clients to quickly connect their data, making it immediately available for analysis and AI applications. Subsequently, we integrate our suite of solutions to develop AI/ML and LLM-based systems, including RAG (retrieval-augmented generation).

The **Denodo Platform** is a **logical data management** solution that enables real-time access to data across disparate sources, including the siloed applications within individual data lakehouses, without requiring the data to first be consolidated into a common repository.

Through our winning combination, clients can discover data attributes they may not have previously identified, allowing for clearer data definitions and the creation of a comprehensive data marketplace. Building on Denodo's well-organized data foundation, we deliver even more robust AI solutions, significantly enhancing client satisfaction. Our clients gain faster, more valuable insights.

About Azwell

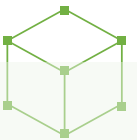

Founded in 1995, our company has a 31-year history, originally starting with the Oracle (formerly Sun) business. Since then, we have significantly expanded through partnerships with Dell Technologies and NVIDIA. As a company that has grown based on data, we are recognized as a leader in data-driven AI. We support our clients' digital transformation and provide data consulting and solutions in collaboration with leading consulting firms such as Deloitte and EY.

As a long-standing NVIDIA partner, we have successfully delivered AI solutions across a wide range of industries, including manufacturing, finance, healthcare, logistics, and entertainment. For each project, we provide customized solutions tailored to our clients' needs, and our practical know-how enables us to build even more sophisticated AI systems.

In this rapidly changing era, we are committed to being the optimal partner for clients seeking growth through AI business, offering a full stack of AI services including consulting, infrastructure implementation, and technical support.

About Denodo

Denodo is a global leader in data management, powering trustworthy AI agents and applications. The Denodo Platform, an award-winning logical data management solution, transforms enterprise data into reliable insights for AI, analytics, and self-service initiatives. Organizations worldwide use Denodo to deliver AI-ready, business-ready data in a fraction of the time compared to traditional data lakehouses, achieving up to 4x faster time-to-insight, 345% ROI, and 10x better performance.

“

“Azwell AI delivers the highest level of service to our clients by driving innovation and advancement in AI technology, creating new value across a wide range of industries. As a long-standing NVIDIA partner, we have successfully delivered tailored AI solutions in sectors such as manufacturing, finance, healthcare, logistics, and entertainment. For each project, we provide customized solutions that meet our clients' unique needs, leveraging our extensive expertise to build sophisticated AI systems.”
