BDO and Denodo

Turning Distributed Enterprise Data into Governed, Business-Ready Information

BDO helps organizations modernize how they access, manage, and use data across increasingly complex technology environments. With deep experience in logical data management and data virtualization, we combine expertise in the Denodo Platform with broader capabilities in data strategy, governance, analytics, cloud, and business transformation to help organizations realize lasting enterprise-wide value from their data.

Together with Denodo, we help clients connect data across cloud, on-premises, SaaS, and operational systems through a logical data layer that enables trusted, governed access to information without requiring replication. This approach helps organizations accelerate reporting, analytics, operational decision-making, and emerging AI initiatives while reducing integration complexity and increasing agility.

The Business Challenges We Solve

Fragmented Data and Slow Access
Critical information is distributed across legacy platforms, cloud services, data warehouses, data lakes, data lakehouses, and business applications. Traditional point-to-point integration and data movement can make each new requirement costly and slow.

Inconsistent Definitions and Governance
Different teams often calculate the same measure differently, apply access rules unevenly, or struggle to understand lineage and ownership. This reduces confidence in analytics and creates avoidable reconciliation work.

Modernization without Disruption
Organizations need to support cloud, analytics, self-service, applications, and AI while existing systems remain in operation. Large migrations can take years, so the business needs value before every platform has been replaced.

Our Solution

Accelerated Delivery through a Logical Data Layer
BDO designs reusable Denodo views and data services that provide unified access across heterogeneous sources, reducing unnecessary replication and shortening the route from requirement to usable data.

Trusted, Governed Information
We align business definitions, security, metadata, lineage, and delivery standards so consumers can find and use consistent data with appropriate controls.

Practical Modernization and Adoption
Our teams connect the Denodo Platform to the client's wider data and analytics ecosystem, tune performance, prioritize high-value use cases, and transfer knowledge. This supports incremental modernization while protecting existing investments and creating a foundation for analytics, digital solutions, and AI-ready data.

The BDO and Denodo Partnership

Through our partnership with Denodo, we help organizations unlock the full value of their enterprise data. Together, we offer:

- A combination of platform specialization and transformation experience, linking Denodo architecture and development with BDO capabilities in data strategy, governance, cloud, analytics, and operating-model design.
- End-to-end support from discovery and architecture through implementation, performance optimization, production readiness, enablement, and ongoing improvement.
- A pragmatic path through hybrid and multi-platform environments. Clients can expose trusted data across existing and modern systems while reducing dependence on brittle point-to-point integrations and avoiding unnecessary data movement.
- A blend of data, technology, and business expertise that helps organizations move from isolated data initiatives to enterprise-wide transformation.
- Industry experience across diverse sectors and use cases, helping organizations apply proven approaches to reporting, analytics, operational decision-making, and AI initiatives.
- Access to a broader range of technology, advisory, and business transformation expertise, helping organizations address people, process, governance, and technology challenges alongside their data initiatives.

BDO is a leading provider of professional services, delivering assurance, tax, and advisory solutions to organizations across Canada and around the world through the BDO global network. BDO's Technology practice helps clients turn strategy into practical outcomes across data and analytics, cloud, digital transformation, cybersecurity, enterprise applications, and managed services. Our Denodo capability builds on the specialized experience developed by SimplicityBI (SBI) and combines it with BDO's multidisciplinary teams, industry knowledge, and focus on sustainable client outcomes. Visit bdo.ca for more info.

Denodo is the AI data layer company. The award-winning Denodo Platform powers trustworthy agents and applications, transforming enterprise data into reliable insights for analytics and self-service. Organizations worldwide deploy the Denodo Platform alongside their data lakehouses to deliver AI-ready, business-ready data in a fraction of the time—achieving up to 4x faster time to insight, 345% ROI, and 10x better performance.
