

Unlock Real-Time Insights with Cadeon+Denodo

Cadeon partners with Denodo to deliver customized data management solutions that provide real-time, trusted data across your enterprise. With proven expertise in Denodo upgrades, implementations, and managed services, Cadeon helps organizations modernize their data architectures, reduce complexity, and accelerate decision-making — all with minimal disruption and maximum ROI.

Business Challenges Solved

- **Data Silos and Integration Complexity:** Organizations often struggle with fragmented data across cloud and on-premises systems. Cadeon and Denodo solve this with logical data management, enabling seamless, real-time access to all data without relying on replication.
- **Slow Time-to-Insight:** Traditional extract, transform, and load (ETL) processes delay analytics. Our solution delivers faster insights through a virtual data layer, improving agility and decision-making.
- **Cloud Integration and Migration Challenges:** As businesses adopt hybrid and multi-cloud strategies, integrating data across environments becomes complex. Cadeon's expertise enables smooth Denodo deployments that simplify cloud data access and accelerate digital transformation.

Our Solution

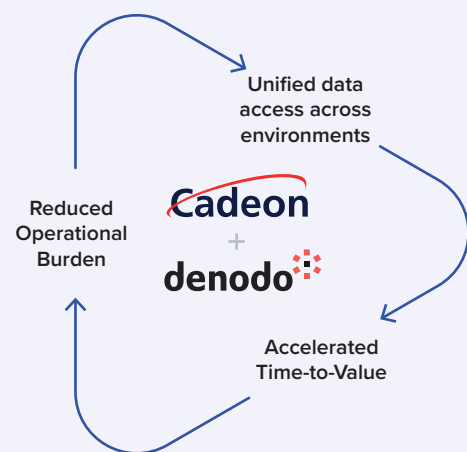

Cadeon's partnership with Denodo delivers a powerful combination of expertise and technology to solve today's most pressing data challenges.

Unified Data Access Across Environments: We provide seamless integration of cloud, on-premises, and hybrid data sources through the Denodo Platform's data virtualization layer, eliminating silos without complex data movement.

Accelerated Time-to-Value: Cadeon's rapid deployment approach, combined with the Denodo Platform's real-time access capabilities, enables faster insights and more agile decision-making.

Reduced Operational Burden: With Cadeon's proven upgrade services and end-to-end managed support, teams can focus on innovation while Cadeon keeps your Denodo environment secure, scalable, and high-performing.

Working together, both companies help you unlock the full value of your data — wherever it lives.

PROBLEMS

Data Silos and Integration Complexity

Slow Time-to-Insight

Cloud Integration and Migration Challenges

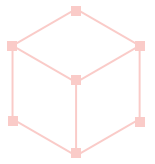

SOLUTIONS

Unified data access across environments

Accelerated Time-to-Value

Reduced Operational Burden

Features and Benefits of the Combined Solution

The Cadeon + Denodo partnership delivers a seamless, end-to-end data management solution designed for speed, scalability, and simplicity.

End-to-End Data Virtualization Expertise: Cadeon enables rapid deployment, configuration, and optimization of the Denodo Platform, reducing time-to-value and promoting best practices from day one.

Proactive Managed Services and Upgrades: Cadeon provides ongoing support, monitoring, and maintenance to keep Denodo Platform environments running efficiently and securely, with minimal downtime.

Seamless Cloud and Hybrid Integration: The Denodo Platform enables unified access to cloud, on-premises, and multi-source data — without requiring replication — streamlining analytics while improving data governance.

Scalable, Real-Time Access: Together, Denodo + Cadeon enables users to access and query distributed data in real time, enhancing agility, reducing infrastructure costs, and accelerating business decisions.

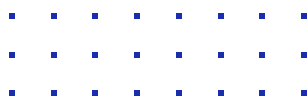

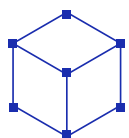

Case Study: A Large International Oil & Gas Company

This company, a leading presence in China, primarily focused on offshore crude oil and natural gas exploration and production. A forward-thinking company, it was leveraging data virtualization, but the company needed to modernize its data virtualization environment due to a number of challenges that included high licensing costs, the downsizing of the company's workforce, a lack of predictability, and an unsustainable increase in the number of triggers, procedures, functions, and views.

Cadeon partnered with Denodo to develop a scalable, supportable data virtualization infrastructure that supported this company's short- and long-term goals: meeting aggressive implementation timeframes, resolving technical issues like security certificates and database caching, and optimizing the performance of Denodo views while validating their alignment with business needs. Cadeon also evolved the Denodo Platform to meet the company's additional requirements. The overall solution will be 50% of the cost of the previous data virtualization solution.

About Cadeon

Cadeon Inc. is a data and analytics consulting firm that helps organizations turn information into insight — faster and more efficiently. As a proud Denodo partner, Cadeon specializes in data virtualization, enabling clients to seamlessly access, integrate, and analyze data across multiple systems without the cost and complexity of traditional data movement. With deep expertise in the Denodo Platform, Cadeon helps businesses modernize their data architecture, improve performance, and accelerate time-to-insight. From real-time data access to secure, scalable solutions, Cadeon enables clients to get the most out of their data with minimal disruption. Whether you're just starting your data virtualization journey or looking to optimize your existing infrastructure, Cadeon delivers the strategy, implementation, and support to make it happen.

“

We initially started working with Cadeon in the summer of 2017, at CREB®. Our first engagement was focused on a strategic dashboarding proof-of-concept, with some deeper analytical aspirations for the future. Our foray into this new area was met with encouragement and support; and we pulled the trigger on our first Spotfire licenses. Fast forward to Q3 of 2018, and we have a strategic dashboard up and running for our board of Directors, which is believed to be best-of-breed in our industry. The Cadeon team was amazing, helping us get from concept to reality. No doubt our organizations will collaborate and work together on projects for years to come. Providers are everywhere, but partners are diamonds in the rough. Cadeon is absolutely our partner in information innovation.

— Shane Griffin, Manager of IT, Calgary Real Estate Board
